Overview

A web application that shows the statistics of the TOP 10 Teams also can see the ranking of the basketball team in this league in the past 5 years in a visualization that you easy to understand! Moreover, the comparison between the 2 teams competing together is provided too you can easily see the percentage of their winning rate!

Motivation

We want to study more structure about NBA overall score and also provide the analysis of the score which is easier than compute it by themselves.

Pain point

The basketball score counting has many factors to compute but sometimes they just want to see the overall percentage of the basketball team winning rate between 2 teams because they don't want to waste time considering by themselves. So they don't have to compare it by themselves.

Overall architecture

```
graph TD; A[ ] --- B[ ]; A --- C[ ]; A --- D[ ]; B --- E[ ]; B --- F[ ]; D --- G[ ]; style A fill:#ccc,stroke:#333,stroke-width:2px; style B fill:#ccc,stroke:#333,stroke-width:2px; style C fill:#ccc,stroke:#333,stroke-width:2px; style D fill:#ccc,stroke:#333,stroke-width:2px; style E fill:#ccc,stroke:#333,stroke-width:2px; style F fill:#ccc,stroke:#333,stroke-width:2px; style G fill:#ccc,stroke:#333,stroke-width:2px;
```

A hand-drawn hierarchical diagram in a sketchy, hand-drawn style. At the top is a single box. A horizontal line connects it to three boxes below it. The leftmost box has two boxes below it, and the rightmost box has one box below it. The boxes are drawn with simple outlines and some internal scribbles or lines.

Architecture

NodeJs

- We use node js as the backend

Express

- We use the express to provide the webservice with EJS as the template engine .

Collection mechanisms

We use web scraper method to scrap the data from the Yahoo! sports

Web scraper with Yahoo! sports **NBA**

```
var eastHead;
var westHead;
var list_east_name = [];
var list_west_name = [];

const response = await axios(url)

const html = response.data;
const $ = cheerio.load(html);
const eastTable = $('table:nth-of-type(1) span:nth-of-type(2)');
const westTable = $('table:nth-of-type(2) span:nth-of-type(2)');

for (var i = 0; i < eastTable.length; i++) {
  list_east_name.push(eastTable[i].children[1].data);
  if (i == eastTable.length - 1) {
    eastHead = eastTable[i].children[1].data
  }
}

for (var i = 0; i < westTable.length; i++) {
  list_west_name.push(westTable[i].children[1].data);
  if (i == westTable.length - 1) {
    westHead = westTable[i].children[1].data
  }
}
```

We use the web
scraper to obtain
all NBA team
name

Web scraper with Yahoo! sports **NBA**

```
const tableData = await scraper.get(url)

for (var i = 0; i < tableData[1].length; i++) {

  var east_data = {
    Team_name: list_east_name[i],
    Conference: 'Eastern',
    Rank: i + 1,
    W: tableData[1][i][eastHead],
    L: tableData[1][i]['W'],
    Pct: tableData[1][i]['L'],
    CGB: tableData[1][i]['GB'],
    Home: tableData[1][i]['CGB'],
    Div: tableData[1][i]['Home'],
    Conf: tableData[1][i]['Div'],
    Last10: tableData[1][i]['Conf'],
    PF: tableData[1][i]['Last 10'],
    PA: tableData[1][i]['PF'],
    Diff: tableData[1][i]['PA'],
    Streak: tableData[1][i]['Diff'],
    Year: year
  }
  eastData.push(east_data);
}
```

We use the **table-scraper** simple utility for scraping data from html tables on a given website into a list of value in standing board and then return to javascript objects

Database

Postgres

- The postgres is the sql database. It provides a ORDBMS structure and we decide to store the database in the local server for quick and convenient to use.

Database Schema

```
CREATE TABLE IF NOT EXISTS standing (  
  id SERIAL PRIMARY KEY,  
  rank INT,  
  team_name VARCHAR(255),  
  conference VARCHAR(255),  
  year VARCHAR(255),  
  w_score INT,  
  l_score INT,  
  pct_score FLOAT,  
  cgb_score FLOAT,  
  home_score VARCHAR(255),  
  div_score VARCHAR(255),  
  conf_score VARCHAR(255),  
  l10_score VARCHAR(255),  
  pf_score FLOAT,  
  pa_score FLOAT,  
  diff_score FLOAT,  
  strk_score VARCHAR(255)  
);
```

The standing table

- id is the primary key.
 - rank : Rank of team in each conference each season.
 - team_name : The official team name.
 - conference : Divide the team is come from western or eastern side.
 - year : the year of the competition.
 - w_score : The number of win game in the season.
-

Database Schema

```
CREATE TABLE IF NOT EXISTS standing (  
    id SERIAL PRIMARY KEY,  
    rank INT,  
    team_name VARCHAR(255),  
    conference VARCHAR(255),  
    year VARCHAR(255),  
    w_score INT,  
    l_score INT,  
    pct_score FLOAT,  
    cgb_score FLOAT,  
    home_score VARCHAR(255),  
    div_score VARCHAR(255),  
    conf_score VARCHAR(255),  
    l10_score VARCHAR(255),  
    pf_score FLOAT,  
    pa_score FLOAT,  
    diff_score FLOAT,  
    strk_score VARCHAR(255)  
);
```

The standing table

- l_score : The number of lose game in the season.
 - pct_score : The percentage to win.
 - cgb_socre : The game behind score.
 - home_score : The win/lose score in home.
 - div_score : The win/lose in division.
 - conf_score : The win/lose in the conference (East or West).
-

Database Schema

```
CREATE TABLE IF NOT EXISTS standing (  
    id SERIAL PRIMARY KEY,  
    rank INT,  
    team_name VARCHAR(255),  
    conference VARCHAR(255),  
    year VARCHAR(255),  
    w_score INT,  
    l_score INT,  
    pct_score FLOAT,  
    cgb_score FLOAT,  
    home_score VARCHAR(255),  
    div_score VARCHAR(255),  
    conf_score VARCHAR(255),  
    l10_score VARCHAR(255),  
    pf_score FLOAT,  
    pa_score FLOAT,  
    diff_score FLOAT,  
    strk_score VARCHAR(255)  
);
```

The standing table

- l10_score : The win/lose score in last ten games.
 - pf_score : Personal fouls.
 - pa_score : How many points a team is averaging.
 - diff_score : The difference between the points scored and points against.
 - strk_score : Current Streak, losing or winning in succession.
-

Chart

Chart.js

We use **Chartjs** to represent the winning rate and the rank for the past 5 years of each team. The rank of each team is represented in the form of a line chart.

Moreover, the winning rate for 2 teams are represented in the form of a doughnut chart and also the ranking comparison of 2 teams is represented on a line chart.

Chart

We compute the winning rate by calculating the winning score of each team from the past 5 years and compute the percentage in the past 5 years they won. Then, compare it by using the difference of percentage.
