

# AREA ENVIRONMENTAL MONITORING

BY G N B P GROUP

# Project Description

Our project, Area Environmental Monitoring is a project designed to provide the most recent data on some of the key environmental parameters where we integrated data from multiple data source which are air quality (PM2.5) data, population density, sound levels, etc. in a specific location. By addressing these critical aspects, the project aims to contribute significantly to the environment, public health, and safety.

## About The Project

# **Project** **Motivation**

## **About The Project**

---

Our motivation start from sound intensity detection where we can detect the sound in a certain area or certain events such as at the concert to measure and monitor the sound intensity that is safe for human ears. However, we then also want to measure other values so it cover all major environmental parameters.

This lead us to start project about Area Environmental Monitoring.

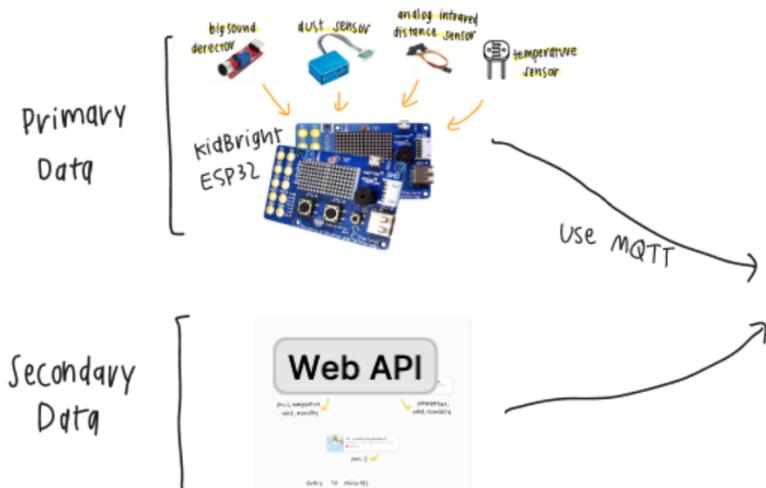

# What will provide to users?

## Answer

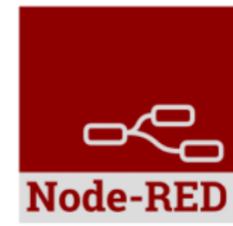

1. What is the latest pm2.5 aqi index at a certain location?
2. How many people are in a particular area recently?
3. What is latest temperature at a certain location?
4. What is latest sound intensity at a certain location?
5. Measurement of the latest wind at a certain location?

API

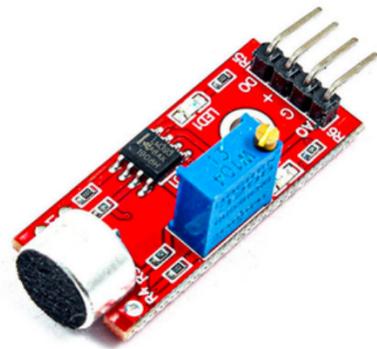

- GET /latest/{param} Return latest average all params from all source
- GET /all/avg/{param} Return all average params from all source
- GET /separate/{param}/{source} Return average value of specific parameters and source
- GET /compare/humcount/{param} Return human in the area compare with other parameters in each hours

# Primary Data Source

# Source

**big sound detector**  
1 ea.

**temperature sensor**  
(maybe from Kidbright)

**connect with  
kidbright  
(ESP32)**

**dust sensor**  
1 ea.

**Analog Infrared Distance Sensor**  
1 ea.

# Primary

## Data Source How we keep

# Source

Each sensor, we keep it in separate table by collect

- Sound: we keep if the value is more than 2000 in sound table
- Temperature: we keep in every 10 minutes in kidbright table
- Dust: we keep in every 10 minutes in dust table
- Analog Infrared: we keep every time that people walk in human count table

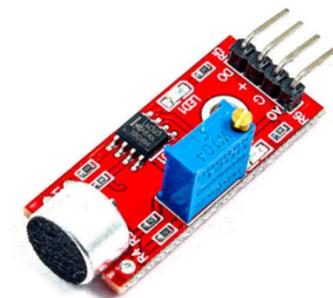

**dust sensor**  
1 ea.

**Analog Infrared Distance Sensor**  
1 ea.

**temperature sensor**  
(maybe from Kidbright)

**big sound detector**  
1 ea.
