

will the cloth
dry, bro?

Let my clothes catch some rays

MOTIVATION

Embarking on this clothes drying project is not just about understanding the time it takes for clothes to dry, it's about diving into the science of efficiency and timing. By delving into this project, we're uncovering valuable insights that can revolutionize the way we approach laundry. Imagine being able to predict with precision the optimal time to start drying your clothes, saving both time and energy. This project isn't just about drying clothes; it's about unlocking the potential for smarter, more sustainable living. Let's embrace this challenge and pave the way for a future where every action is not just functional but also purposeful.

OVERVIEW

We'll use the clothes covering our sensor, which is connected to the kidbright board, to collect data into our database, then spray the water and check the fabric and surrounding humidity every 3 hours to determine the ideal drying time.

PRIMARY DATA

**LIGHT INTENSITY
FROM KIDBRIGHT**

**CLOTHES HUMIDITY
FROM KY-015**

**CLOTHES TEMPERATURE
FROM KY-015**
