GARY & SPONGEBOB

Motivation

The purpose of this project is to measure light intensity and temperature in various learning environments, both indoors and outdoors, by using Kidbright's sensor. Also, data from the API is used to collect humidity and PM2.5 levels. We collect the data from 10.30 a.m. to 4.00 p.m. to determine the best timing and learning spaces for studying. We collect the light and temperature at:

- Co-working space on the third floor of the computer engineering building.
- Engineering library.
- KU main library.
- Economics Library.

Primary Data

MEASURE LIGHT INTENSITY AND
TEMPERATURE BY USING KIDBRIGHT.
FROM 10.30 A.M. TO 4.00 P.M. FOR 2 DAYS.

We collect the light and temperature at:

- Co-working space on the third floor of the computer engineering building.
(indoor and outdoor)
- Economics Library. (indoor and outdoor)
- Engineering library.
- KU main library.

Secondary Data

MEASURE HUMIDITY, AIR QUALITY LEVEL
AND TEMPERATER BY USING API DATA.

We collect:

- Air quality data(PM 2.5) from WAQI.info: World Air Quality Index waqi.
- Humidity and Temperature from Thai Meteorological Department Open Data

Research Paper

EFFECTS OF INDOOR LIGHTING ENVIRONMENTS ON PAPER READING EFFICIENCY AND BRAIN FATIGUE: AN EXPERIMENTAL STUDY

Propose lighting recommendations for paper reading tasks of different durations.

- 15 min: 500 lux-6,500 K
- 30 min: 500 lux-4,000 K
- 60 min: 750 lux-6,500 K

** K = Color temperature in Kelvin

OPTIMAL CLASSROOM TEMPERATURE TO SUPPORT STUDENT LEARNING

Reducing classroom temperatures from 77°F to 68°F (25 °C to 20 °C), the performance of students significantly improved

	Name	Index Value	Advisory
	Good	0 to 50	None
	Moderate	51 to 100	Usually sensitive individuals should consider limiting prolonged outdoor exertion.
	Unhealthy for Sensitive Groups	101 to 150	Children, active adults, and people with respiratory disease, such as asthma, should limit prolonged outdoor exertion.
	Unhealthy	151 to 200	Children, active adults, and people with respiratory disease, such as asthma, should avoid outdoor exertion; everyone else should limit prolonged outdoor exertion.
	Very Unhealthy	201 to 300	Children, active adults, and people with respiratory disease, such as asthma, should avoid outdoor exertion; everyone else should limit outdoor exertion.
	Hazardous	301 to 500	Everyone should avoid all physical activity outdoors.

AIR QUALITY INDEX

Research Paper

PM 2.5

- 0 - 50: Good for studying
- 51 - 100: Usually sensitive individuals should consider limiting prolonged outdoor exertion.
- 101-150: Children, active adults, and people with respiratory disease, such as asthma, should limit prolonged outdoor exertion.

HUMIDITY FOR SCHOOLS CREATING A HEALTHY AND SAFE SCHOOL ENVIRONMENT.

Proper humidification and indoor humidity levels(40-60% RH)
